5. FIRE FIGHTING MEASURES

Flash Point: Not available

Method: Not available

Autoignition Temperature: Not determined

FLAMMABLE LIMITS IN AIR, BY % VOLUME

Upper: Not determined

Lower: Not determined

EXTINGUISHING MEDIA:

Water, dry chemical, alcohol foam, carbon dioxide.

FIRE FIGHTING PROCEDURES:

Evacuate unnecessary personnel and eliminate all sources of ignition. Wear NIOSH/MSHA approved positive pressure self-contained breathing apparatus and full protective clothing.

FIRE AND EXPLOSION HAZARD:

High concentration of airborne dust may form explosive mixture with Air. Ensure that good housekeeping practices are followed as well as applicable guidelines such as the National Fire Protection Association [NFPA] 654, "Prevention of Fire and Dust Explosions from the Manufacturing, Processing, and Handling of Combustible Particulate Solids". Vapors may be heavier than air and may travel along the ground to some distant source of ignition and flash back.

SENSITIVITY TO MECHANICAL IMPACT:

Not applicable.

SENSITIVITY TO STATIC DISCHARGE:

Material can accumulate static charges from handling management. Bond and ground as appropriate. For additional recommendations, consult an applicable guideline such as National Fire Protection Association [NFPA] 77, "Recommended Practices on Static Electricity". The Minimum Ignition Energy for phenolic resins can be as low as 3 mJ [milli-joules]. The Minimum Explosive Concentration for phenolic resins can be as low as 20 g/m³.

6. ACCIDENTAL RELEASE MEASURES

PERSONAL PRECAUTIONS:

Evacuate unnecessary personnel and eliminate all sources of ignition.

ENVIRONMENTAL PRECAUTIONS:

Contain material and prevent accumulation of dust.

Do not flush to sewer.

MATERIAL SAFETY DATA SHEET/DYPHENE 8318/PAGE 5

6. ACCIDENTAL RELEASE MEASURES (Continued)

METHODS FOR CLEANING UP:

Sweep or vacuum spills. To minimize dust, vacuum cleaning is preferred.

7. HANDLING AND STORAGE

HANDLING:

Guard against dust accumulation of this material. As with all chemicals good industrial hygiene practices should be followed when handling this material. When the container(s) is empty it may retain product residue including vapors which could accumulate. Therefore, do not cut, drill, grind, or weld empty containers. Additionally, do not conduct such activity(ies) near full, partially full, or empty product containers without appropriate workplace safety authorization(s) or permit(s).

SPECIAL MIXING AND HANDLING INSTRUCTIONS:

Not applicable.

STORAGE:

Protect container from physical abuse. Keep the container tightly closed. Store in a cool, dry, well-ventilated storage area. Keep separate from incompatibles. Bond and ground containers when transferring material. Empty product containers may contain product residue. Do not reuse empty containers.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

ENGINEERING CONTROLS:

Ventilation should be sufficient to effectively remove and prevent buildup of any vapors, dusts, or fumes that may be generated during handling or thermal processing. In order to ensure appropriate electrical safety practices are followed, consult applicable standards. These may include guidelines such as the National Fire Protection Association [NFPA] 70, "The National Electrical Code" and NFPA 499, "Recommended Practice for the Classification of Combustible Dusts and of Hazardous (Classified) Locations for Electrical Installations in chemical Process Areas". NOTE: since this material's vapors, dust or fumes can form explosive mixtures in air, ensure that any potential areas where explosions may occur are designed to minimize potential damage. For recommendations to prevent such explosions and associated damage, consult applicable guidelines such as National Fire Protection Association (NFPA) 69, "Standard on Explosion Prevention Systems" and/or NFPA 68, "Guide for Venting Deflagrations".

8. EXPOSURE CONTROLS/PERSONAL PROTECTION (Continued)

WATER X ACIDS OTHER
 HEAT ALKALIS NONE
 HAZARDOUS POLYMERIZATION:

OCCURS X WILL NOT OCCUR
 COMMENTS:

Exposure to high temperature and/or moisture causes resin agglomeration.

HAZARDOUS DECOMPOSITION PRODUCTS:

Complete combustion yields carbon dioxide and water. Incomplete combustion yields carbon monoxide, olefinic and parafinic compounds. Varying amounts of ketones, aldehydes, alcohols and aromatics may also be formed.

11. TOXICOLOGICAL INFORMATION

This material contains "nuisance" dust. The number of factors associated with retention of pulmonary dusts are large. The most important factors appear to be (1) dust overload, (2) particle size, (3) solubility and (4) the toxic potency. This material is comprised of relatively insoluble materials of low toxic potency. The dust in breathing air must be reduced so that lung burdens are well below 1000 nl/g lung. Lung clearance occurs by dissolution and by alveolar-macrophage mediated clearance. A study in mice indicated that dust overloading compromised pulmonary immune function. The exposure limits for nuisance dust are:

PEL = 15mg/m3 (total) 8 hr. TWA
 PEL = 5mg/m3 (resp.) 8 hr. TWA
 TLV = 10mg/m3 (total) 8 hr. TWA
