

WESTCO™ RETARDER E Vulcanizing Agent
(N-phenyl-N-[(trichloromethyl)thio]-benzene sulphonamide)
CAS# 2280-49-1

Technical Data:

WESTCO™ Retarder E is an effective scorch retarding additive in rubber compounds, especially in those based on EPDM polymers. It delays the onset of cure but does not significantly slow cure rate or state of cure. Commonly used in closed cell EPDM and EPDM blend sponge compounds.

SPECIFICATIONS:

Appearance:	White to light beige powder
*Assay	90.0% Min.
*Ash content	6.0% Max.
*Volatiles	0.3% Max.
*Sieve residue (100 mesh)	0.1% Max.
*Oil content	1.0 - 3.0%

*** Values reported on Certificate of Analysis**

Packaging: 25 kg net weight bags

Storage: Westco Retarder E should be stored at temperatures below 40°C
